

SYMPTOMS OF TETHERED ORAL TISSUES (LIP, & TONGUE TIES)

SYMPTOMS IN INFANT:

- ~ Slow or fast weight gain
- ~ Colic or gas
- ~ Reflux (spitting up)
- ~ Explosive poops
- ~ Blisters on lip, especially upper lip
- ~ White coating on the back of the tongue

SYMPTOMS IN PARENT:

- ~ Painful breastfeeding- nipple and/or breast pain, with or without visible trauma (cracked or bleeding nipples)
- ~ Misshapen nipples after feeding- either flattened, creased or “lipstick” shape
- ~ Frequent clogged ducts, engorgement, nipple blebs or mastitis
- ~ Oversupply or low milk supply

FEEDING SYMPTOMS:

- ~ Difficulty latching
- ~ Noisy nursing (clicking)
- ~ Bites or chomps on nipple
- ~ Slips on and off the breast
- ~ Falling asleep while nursing
- ~ Nurses for a long time, then wakes up as soon as he/she is put down
- ~ Lots of sucks, fewer swallows
